

Compliant Mobile Communications

The Kinetic Communications Platform

- Mobile call recording with existing desk phone recording systems
- Ensure compliance with regulatory and quality requirements
- Maintain full control and security

The Mobile Communications Compliance solution from Tango Networks ensures that mobile communications for mobile workers and employees on-the-go can remain fully compliant with regulatory and quality requirements.

A wide range of regulatory mandates, industry guidelines and company quality controls require recording or monitoring of mobile communications. But complying with these rules across the ever-wider range of mobile devices, varied communications applications, and changing user habits can be a major challenge for IT.

The Kinetic Communications Platform from Tango Networks enables you to monitor, record and archive voice communications on mobiles, just like office desk phones with existing recording systems. The platform permits recording of text messages as well as voice (North America only).

The solution supports even a user's personal devices such as in a Bring Your Own Device (BYOD) program. The Kinetic Platform features the industry's most powerful and flexible

OPTIMIZE ENTERPRISE MOBILE COMMUNICATIONS WITH THE KINETIC COMMUNICATIONS PLATFORM FROM TANGO NETWORKS

- Unlock the power of mobility and BYOD with your current telephony infrastructure while maintaining communications compliance with recording and logging requirements
- Supports archiving of voice communications (and text messages in North America only)
- Leverage your current UC/PBX platforms to extend communications you control to any mobile device
- Adopt a "Mobile First" strategy to retire desk phones without sacrificing telephony features
- Enforce least-cost routing for user communications to slash fees for roaming or international calls
- Simply manage and enforce dual identities on user communications without intrusive device changes

features for managing "Dual Personas" to keep business and personal communications separate. This means that a user's business communications can be automatically recorded for compliance purposes while the user's personal communications are not.

The Kinetic Platform features the industry's best user experience for enterprise communications on mobile devices. This means your users will not use unauthorized applications or devices to do "end runs" around compliance and quality controls.

Now your users can work effectively wherever they are, with the devices they are comfortable with, while maintaining compliance. The platform even operates in multi-vendor, hybrid telephony environments.

Regardless of the PBX or UC platform your business uses, the Kinetic Platform can be implemented quickly and cost-effectively, and tailored to your unique needs. From small companies to multinational enterprises, the Kinetic Platform offers a major leap in productivity and cost-effectiveness.

Regulatory Compliance

- ✎ Ensure financial trader and broker communications are compliant with Dodd Frank and MiFID II regulatory requirements for mobile devices.

Quality Control

- ✎ Monitor and archive the communications of call center representatives, customer care staff and other customer-facing personnel.

Capabilities

Recording

- ✎ Enables centralized recording of real-time mobile voice communications using your existing recording systems
- ✎ Supports recording of text messaging in North America
- ✎ Captures enterprise communications operated on any mobile device, including BYOD
- ✎ Supports all leading recording platforms, including Nice, Verint, Enghouse, ASC, Red Box and Cognia
- ✎ Maintains user privacy with simply configured dual personas for users – ensures private communications remain private
- ✎ Boosts compliance with Dodd-Frank, FCA and other regulations

Highly flexible, highly enforceable

- ✎ Enforces compliance policies across all mobiles, including corporate and BYOD
- ✎ Simple policy definition and execution
- ✎ No end runs: users cannot turn off or circumvent policy enforcement

Industry Innovation Leader

The Kinetic Communications Platform from Tango Networks has enabled more than 250,000 mobile end-points for enterprises around the world. The platform is fully compatible with unified communications, business messaging and enterprise telephony platforms from leading vendors, including Cisco, Microsoft and Avaya.

Covered by 48 patents with 10 additional patents pending, the Kinetic Communications platform is the choice of five Tier 1 service providers for delivering high value services to their enterprise customers.

Tango Networks Mobility Services deliver business communications services on mobile phones using the native dialer for a superior user experience. Mobile UC extends enterprise UC identity and services from an existing PBX system to any mobile phone. Tango's Mobile Call Recording service is the only enforceable solution that works from the native dialer. Business Messaging enables SMS messaging from your business line. These services are available as an add-on subscription via partner service providers including AT&T, Sprint and T-Mobile.
