

True Mobility for Healthcare

The Kinetic Communications Platform

- Secure & compliant voice and messaging communications, even with BYOD
- Workflow-driven communications for greater efficiency and care outcomes
- Superior reachability for quick responsiveness
- Native dialing for intuitive user experience
- Better ROI from communication system investments

The Kinetic Communications Platform from Tango Networks creates true communications mobility for healthcare professionals.

Mobile devices are revolutionizing healthcare environments. Digitized healthcare records accessed on mobile devices simplify and streamline care. Computerized cart technology puts powerful diagnostic tools in reach of care providers.

But voice communications and unified communications (UC) too often remain tied to desk phones. That's no help for busy doctors, nurses, physician assistants and staff who are caring for patients and performing other tasks away from their desk phones.

The Tango Networks' Kinetic Platform makes any mobile device an extension of your existing PBX or Unified Communications system.

The platform means all your hospital and healthcare system personnel can be reached more easily and respond more rapidly to important communications.

With the Tango Networks platform, mobile UC becomes a powerful tool for delivering superior care outcomes.

- Permits rich UC features to be used on any mobile device including BYOD.
- Integrates with the existing PBX / UC for corporate communications, including compliance and policy enforcement controls.
- Delivers industry-leading mobile identity management, with dual personas to separate business and personal communications.
- Offers unique Software-Defined Communications that can be integrated with workflow steps for better care outcomes.
- Implements single number contact for improved responsiveness and first-time call completion.
- Provides outbound caller identification using the corporate number even when a personal device is used.
- Enables centralized communications recording and archiving, including for personal devices.

UNLEASHING ENTERPRISE COMMUNICATIONS FOR CARE PROVIDERS IN HOSPITAL ENVIRONMENTS

The Mobile-Powered Physician

- **Always reachable for critical consultation** *Single number calling means calls to her office are automatically routed to her mobile phone*
- **Uses the mobile device she knows and loves** *The mobile device's "Green*

Button" is integrated with the hospital's PBX for intuitive, frustration-free dialing

- **Professional communications separate from personal** *Industry-leading dual persona management enhances security and means work calls use the corporate number, personal calls use the personal number*

- **Always compliant** *Work calls can be recorded automatically if policy requires it, even when she is using her personal mobile device*

The Kinetic Platform features the industry's best user experience for enterprise communications on mobile devices. This means your users will not use unauthorized applications or devices to do "end runs" around your corporate communications systems and policy enforcement and security controls.

Now your care providers and staff can work effectively wherever they are, with the devices they are comfortable with, while maintaining security and compliance. The platform even operates in multi-vendor, hybrid UC environments.

Regardless of the PBX or UC platform your business uses, the Kinetic platform can be implemented quickly and cost-effectively, and tailored to your unique needs.

Capabilities

Policy compliant, secure communications

- Automatically separates work and personal communications including on BYOD without any user configuration or management
- Logs and records calls if required by policy
- Can secure and ensure compliance for voice and text messaging communications (messaging compliance available in North America only)
- Ties mobile communications into your PBX / UC, not relying on third party apps or communication out of your control

Superior experience & workflow integration

- Highly intuitive user experience means users won't do "end runs" around your communications systems
- Frustration-free operation means users can focus on providing superior care, not wrestling with messy apps
- Platform can be integrated into application workflows to deliver communications synchronized with workflow processes and steps

High reachability for care providers on the go

- The mobile becomes an extension of the communications system
- Standard calling features operate on the mobile, even BYOD
- Single number, first-time reach aids in efficient communication for superior care outcomes and patient satisfaction

OPTIMIZE ENTERPRISE MOBILE COMMUNICATIONS WITH THE KINETIC COMMUNICATIONS PLATFORM FROM TANGO NETWORKS

- Unlock the power of mobility and BYOD with your current telephony and UC systems
- Leverage your current UC/PBX platforms to extend communications you control to any mobile device
- Supports archiving of voice communications (and text messages in North America only)
- Adopt a "Mobile First" strategy to retire desk phones without sacrificing telephony features
- Simply manage and enforce dual identities on user communications without intrusive device changes

Industry Innovation Leader

The Kinetic Communications Platform from Tango Networks has enabled more than 250,000 mobile end-points for enterprises around the world.

The platform is fully compatible with unified communications, business messaging and enterprise telephony platforms from leading vendors, including Cisco, Microsoft and Avaya.

Covered by 48 patents with 10 additional patents pending, the Kinetic Communications platform is the choice of five Tier 1 service providers for delivering high value services to their enterprise customers.

Contact Tango Networks today to explore how the Kinetic Communications Platform can optimize mobile communications for your enterprise.

Tango Networks Mobility Services deliver business communications services on mobile phones using the native dialer for a superior user experience. Mobile UC extends enterprise UC identity and services from an existing PBX system to any mobile phone. Tango's Mobile Call Recording service is the only enforceable solution that works from the native dialer. Business Messaging enables SMS messaging from your business line. These services are available as an add-on subscription via partner service providers including AT&T, Sprint and T-Mobile.
